In its morning update on March 1, the Vatican said the 88-year-old pope didn't have any further respiratory crises overnight.

"The night has passed quietly, the pope is resting," the morning bulletin said.

The pontiff had coffee in the morning for breakfast, suggesting that he was not dependent on a ventilation mask to breathe and was still eating on his own.

In the [late Friday update](#), the Vatican said Francis suffered an “isolated crisis of bronchial spasm,” a coughing fit in which Francis inhaled vomit, that resulted in a “sudden worsening of the respiratory picture.”

Doctors aspirated the vomit and placed Francis on noninvasive mechanical ventilation.

The pope remained conscious and alert at all times and cooperated with the maneuvers to help him recover. He responded well, with a good level of oxygen exchange and was continuing to wear a mask to receive supplemental oxygen, the Vatican said.
